

## 10G SFP+ Transceiver

### MTRS-02X13-G

#### Features

- Up to 10km transmission distance over SMF
- Support data rate up to 10.3125Gbps
- 1310nm DFB and PIN receiver
- SFI electrical interface
- 2-wire interface for integrated Digital Diagnostic monitoring
- SFP MSA package with duplex LC connector
- Hot pluggable
- Very low EMI and excellent ESD protection
- +3.3V power supply
- Power consumption less than 1W
- Operating case temperature: 0~+70°C

#### Applications

- High-speed storage area networks
- Computer cluster cross-connect
- Custom high-speed data pipes
- LTE optical repeater application

#### Compliance

- Compliant with IEEE 802.3ae-2002
- Compliant with MSA SFF-8472
- Compliant with MSA SFF-8431
- Compliant with MSA SFF-8432

#### Description

MTRS-02X13-G is a high performance, cost effective modules, which is supporting data rate up to 10.3125Gbps, and transmission distance up to 10km over single mode fiber. The transceiver consists of two sections: The transmitter section incorporates a 1310nm DFB TOSA and laser driver. The receiver section consists of a PIN photodiode integrated with a transimpedance amplifier (TIA) and limiting amplifier (LA). The module is hot pluggable into the 20-pin connector. The high-speed electrical interface is base on low voltage logic, with nominal 100 Ohms differential impedance and AC coupled in the module.

The optical output can be disabled by LVTTTL logic high-level input of TX\_DIS. Transmit Fault (Tx\_Fault) is provided to indicate that the module transmitter has detected a fault condition related to laser operation or safety. Loss of signal (RX\_LOS) output is provided to indicate the loss of an input optical signal of receiver. A serial EEPROM in the transceiver allows the user to access transceiver monitoring and configuration data via the 2-wire SFP Management Interface. as specified in SFF-8472.

19	CML-I	TD-	Transmitter Inverted Data Input	
20		VeeT	Module Transmitter Ground	Note1

**Notes:**

- [1] The module signal ground pins, VeeR and VeeT, shall be isolated from the module case.
- [2] This pin is an open collector/drain output pin and shall be pulled up with 4.7k-10kohms to Host\_Vcc on the host board. Pull ups can be connected to multiple power supplies, however the host board design shall ensure that no module pin has voltage exceeding module VccT/R + 0.5 V.
- [3] This pin is an open collector/drain input pin and shall be pulled up with 4.7k-10kohms to VccT in the module.
- [4] See SFF-8431 4.2 2-wire Electrical Specifications .
- [5] This pin shall be pulled up with 4.7k-10kohms to Host\_Vcc on the host board.

## Block Diagram of Transceiver

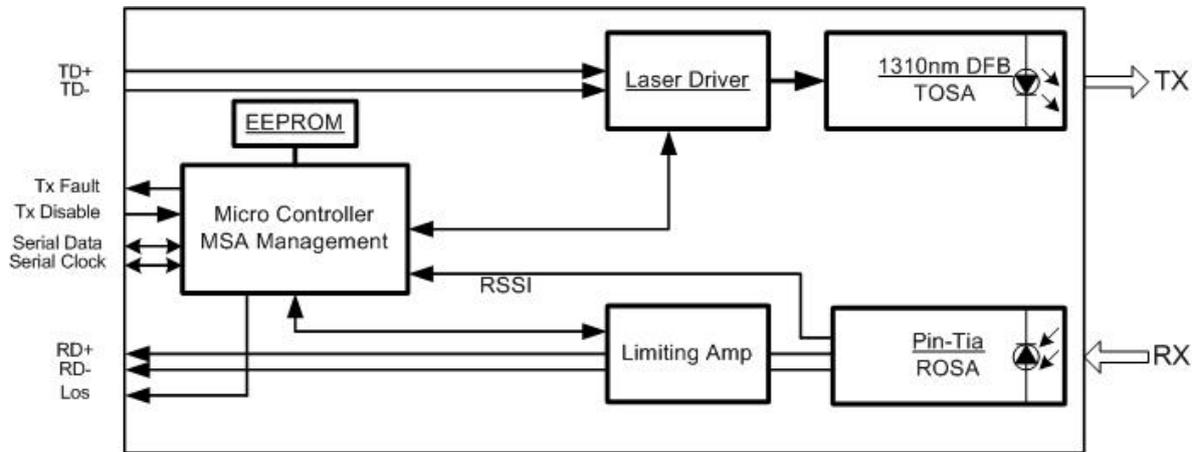

Figure2

### <Transmitter Section>:

The transmitter converts 10Gbit/s serial CML electrical data into serial optical data compliant with the 10GBASE-LR standard. An open collector compatible Transmit Disable (Tx\_Dis) input contact is provided. A logic "1," or no connection on this pin will disable the laser from transmitting. A logic "0" on this pin provides normal operation. This contact shall be pulled up to VccT with a 4.7 kΩ to 10 kΩ resistor. The transmitter has an internal automatic power control loop (APC) to ensure constant optical power output across supply voltage and temperature variations. An open collector compatible Transmit Fault (Tx\_Fault) is provided. TX\_Fault is a module output contact that when high, indicates that the module transmitter has detected a fault condition related to laser operation or safety. contact shall be pulled up to the Vcc\_Host in the host with a resistor in the range 4.7-10 kΩ.

### <Receiver Section>:

The receiver converts 10Gbit/s serial optical data into serial CML electrical data. An open collector compatible Loss of Signal is provided. Rx\_LOS is a module output contact when high indicates an optical signal level below that specified in the relevant standard. Such an indication typically points to non-installed cables, broken cables, or a disabled, failing or a powered off transmitter at the far end of the cable. This contact shall be pulled up to Vcc\_Host in the host with a resistor in the range 4.7-10 kΩ, or with an active termination. Power supply filtering is recommended for both the transmitter and receiver.
